

OS X Terminal shortcut: Jump to beginning/end of line

Ask Question

Asked 5 years, 10 months ago Active 1 month ago Viewed 101k times

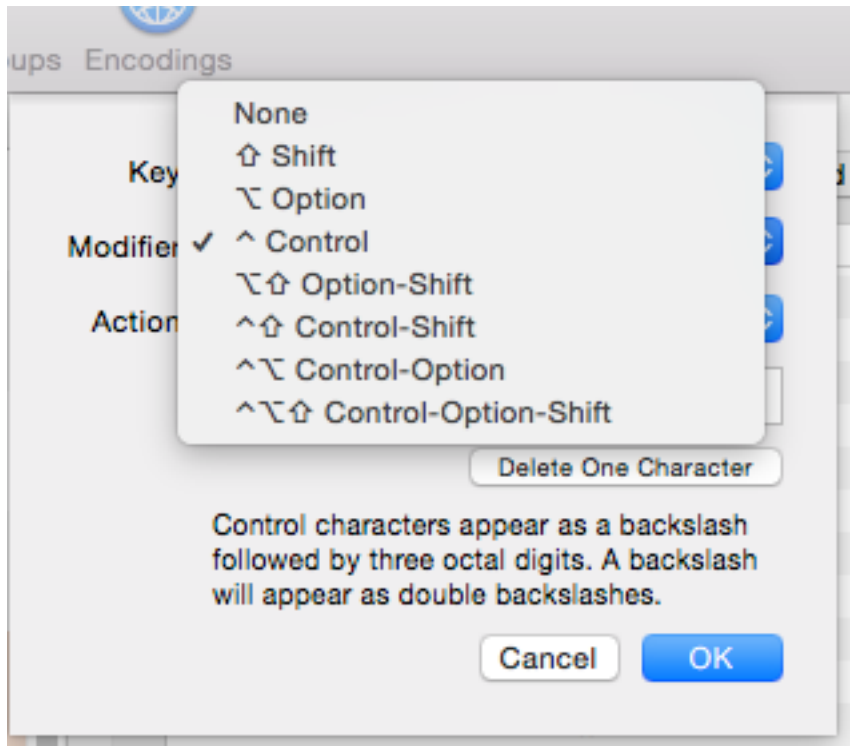

I know that I can jump to the beginning and end of a line inside the OS X terminal with `Ctrl + A` and `Ctrl + E`. But I'm so used to jumping with `Cmd + Right` arrow and `Cmd + Left` arrow from my editor, that I would love to use these shortcuts for the terminal too.

I haven't found a solution with Google, so maybe here someone can help.

Update

As in the comments, I tried the solution from [How to move the cursor word by word in the OS X Terminal](#)

Unfortunately, the Terminal settings seems to not include `Cmd` as a Modifier Key, as you can see here:

I use a handy app called [Karabiner](#) to do this, and many other things. It's free and open source.

It's a keyboard remapper, with a lot of handy presets for many common remaps that people may want to do.

As you can see from the screenshot, this remap is included as a preset in Karabiner.

Hope this helps. Happy remapping!
